

East Brunswick High School Stadium

Township of East Brunswick | Middlesex County, NJ

Van Cleef was contracted to assist the district to support the comprehensive redevelopment of the East Brunswick High School track and stadium. This project delivered a modern, high-performance athletic facility designed to meet the needs of student-athletes while maximizing functionality and long-term durability.

The project included the full reconstruction of the existing 400-meter running track, upgrading it from a 6-lane configuration with an 8-lane straightaway to a state-of-the-art system featuring a premier, solid, pre-manufactured synthetic running surface. This enhancement provides improved safety, performance, and longevity for competitive and recreational use.

In addition, the natural grass infield was replaced with a multi-purpose synthetic turf field, strategically striped to accommodate a variety of sports programs. This upgrade ensures increased field availability, reduced maintenance, and consistent playing conditions throughout the year.

To further enhance site performance, Van Cleef designed innovative subsurface stormwater management solutions integrated within the infield. These systems effectively meet regulatory stormwater requirements while minimizing the need for additional above-ground infrastructure, optimizing the use of available space.
